Instructions for BarryUWireless (Mac OS X)

The instructions below are for manually configuring a laptop to connect to the BarryUWireless network. If you want to run the automatic setup, click Automatic Setup and follow the instructions on the page. Barry wireless uses 802.1x type secure authentication, authorization and accounting. The 802.1x client, if configured properly for Barry, will prompt you for your BarryNet username and password, the same credentials that you use to log in to your e-mail or office and lab computers. T...

Instructions for BarryUWireless (MAC OS X LION)

** Note: The issue that many seem to be experiencing with their Mac and the network connection to our network appears to be a worldwide problem with Mac OS X Lion's wireless functionality. Many users maintain a connection to a network, but some Mac OS X Lion users continue to have problems with their Internet connection dropping and/or failing after reset or after closing their laptop which then puts it into sleep mode. The issue of wireless connection dropping is not a campus issue b...
